

RTM AGM 2027 — Financials, explained

Internal · plain-English breakdown of every number · Cotton Bay, Rodrigues · 13-16 May 2027 (3 nights)

Pricing is provisional until the AGM event budget and flights are confirmed. Figures use the hotel's rates plus two assumed inputs (event share, buffer), both flagged.

The one idea that makes it all click

The hotel charges per room, not per person. A room with one adult is Rs 7,000/night. The same room with two adults is Rs 10,200/night — only **Rs 3,200 more** for the second person, not another Rs 7,000. So two people sharing is far cheaper per head than two singles. Almost every "wait, why?" comes from forgetting this.

1. Raw hotel costs (per night · half board · drinks excluded)

What	Per night
Room, 1 adult (single occupancy)	Rs 7,000
Room, 2 adults (double occupancy)	Rs 10,200
Each child sharing the room	Rs 1,400

Plus a one-off **Rs 10,000 per adult** for return flights + airport transport. Child flight ≈ Rs 6,000 (estimate — confirm the Air Mauritius child fare).

2. Over the 3 nights

What	3 nights
Room, 1 adult	Rs 21,000
Room, 2 adults	Rs 30,600
Each child	Rs 4,200

3. Cost per person when a room is shared

Two adults in a double = Rs 30,600. Split 50/50 = **Rs 15,300 each**. That's the "sharing" accommodation cost per adult.

Accommodation per adult, 3 nights	Rs
Sharing a double (½ of 30,600)	15,300
Alone in a room (single)	21,000

Sharing saves each adult **Rs 5,700** versus going single.

4. Two kinds of guest

Tabler (member) — attends the AGM. Carries a share of the AGM event costs + a small buffer. **Companion (partner or child)** — on the trip, *not* in the AGM. Pays only their own accommodation + flight. No event share. No buffer.

5. How each price is built

Provisional inputs: AGM event share **Rs 3,000 / member**, buffer 5%.

Ticket	Accommodation	Flight	Event	Buffer	Price
Member — sharing	15,300	10,000	3,000	5%	≈ 29,700
Member — single room	21,000	10,000	3,000	5%	≈ 35,700
Companion (partner)	15,300	10,000	—	—	= 25,300
Child	4,200	6,000	—	—	= 10,200

Worked: member sharing = (15,300 + 10,000 + 3,000) × 1.05 = 28,300 × 1.05 ≈ **29,700**.

6. Why the companion is Rs 25,300 (the confusing one)

The Rs 15,300 is **not an extra charge** — it's the companion's **half of the double room you're already in**. The room is Rs 30,600 for the two of you; split evenly = Rs 15,300 each. Add their Rs 10,000 flight = **Rs 25,300**.

But the companion *line* is **not** what bringing them adds to your bill:

You're booking...	Your ticket	Partner	You pay
Just you — single room	35,700	—	35,700
Just you — twin-share w/ a Tabler	29,700	—	29,700
You + partner — one room	29,700	25,300	55,000

Bringing your partner: **35,700 → 55,000 = about Rs 19,300 more**, not Rs 25,300. Why the gap? Sharing a room **also drops your own ticket** from 35,700 (single) to 29,700 (shared) — a Rs 6,000 saving. So partner's line 25,300 – your saving 6,000 = **~Rs 19,300 real cost**.

Cross-check from the room side: partner's flight (10,000) + the single→double upgrade (30,600 – 21,000 = 9,600) = **~Rs 19,600**. Same answer. ✓

7. What actually matters: the room / couple total

However you slice it between "member" and "companion," RTM collects the same. For a **couple in one room, 3 nights, all-in**:

Line	Rs
Double room (both of you), half board	30,600
2 × flights + transport	20,000
AGM event share (member only)	3,000
Buffer (5%)	~1,400
Total for two	≈ 55,000

8. Worked booking examples

Who	Maths	Total
Solo Tabler — twin-share	29,700	Rs 29,700
Solo Tabler — single room	35,700	Rs 35,700
Tabler + partner	29,700 + 25,300	Rs 55,000
Tabler + partner + 1 child	55,000 + 10,200	Rs 65,200
Tabler + partner + 2 children	55,000 + 20,400	Rs 75,400

9. Where RTM's money goes (per member ticket, Rs 29,700)

Slice	Rs	Goes to
Accommodation	15,300	Hotel
Flights + transport	10,000	Air Mauritius
AGM event share	3,000	Marquee, catering, gala, décor
Buffer	~1,400	RTM — contingency / small surplus

The **only margin is the buffer** (~Rs 1,400/member). Companions and children are billed **at cost** — they add no surplus. At ~120 members the buffer pools to **~Rs 170,000** — enough to absorb an event overrun, or land as a small surplus. Break-even is the goal; the surplus is a cushion, not the point.

10. The levers (what moves these numbers)

Event share (Rs 3,000) — the biggest unknown, and the one to lock first. It's marquee + AGM catering + gala + décor ÷ number of members. Confirm the event budget and every ticket firms up.

Buffer (5%) — your safety margin / surplus. Raise for more cushion, lower toward pure break-even.

Child flight (Rs 6,000) — an estimate; confirm the Air Mauritius child fare.

How you split a couple — even 50/50 (current) is simplest to state. If you'd rather families *feel* the discount, price a couple as a single **"room for two" package (~Rs 55,000)** and drop the per-person split — same money to RTM, far less confusion. Worth considering for the booking page.
